SUMMARY

Second-year B.Tech Computer Science & Engineering student with hands-on experience in software development, IoT systems, and cybersecurity projects using Python, C++, and JavaScript. Seeking opportunities to apply skills in programming, data structures & algorithms, and problem-solving while collaborating on real-world engineering challenges.

EDUCATION

PSIT (Pranveer Singh Institute of Technology), Kanpur	Jan 2024 – Jan 2028
B.Tech in Computer Science & Engineering	CGPA: 8.56/10
Kendriya Vidyalaya Aliganj, Lucknow	
Senior Secondary School (10+2)	Grade: 83%
High School (10)	Grade: 86%

TECHNICAL SKILLS

Languages: C, C++, Python, JavaScript
Core: OOP, Data Structures & Algorithms, Problem Solving, Debugging
Web & APIs: HTML, CSS, REST APIs, JSON, Chrome Extension APIs
Database: MySQL, SQL, Database Design
IoT & Embedded: Arduino, ESP32, Raspberry Pi, Embedded C, Sensors & Actuators
Tools: Git, GitHub, VS Code, Linux, Postman

EXPERIENCE

IGNITA 2K26	2026
<i>First-Year Promotional Head</i>	
- Appointed as the First-Year Promotional Head, responsible for promoting IGNITA 2K26 among first-year students. - Coordinated with the organizing team to execute promotional activities and student outreach.	

PROJECTS

TrashTrack — Pothole Detection & Reporting System	<i>Python, IoT</i>
- Engineered an automated pothole and road-damage detection system using image processing and sensor data analysis. - Designed an automated reporting workflow to log, track, and forward pothole complaints to Nagar Nigam. - Developed a civic-tech solution focused on road safety, infrastructure maintenance, and municipal accountability.	
IoT-Based Laser Security System	<i>IoT, Arduino, Python</i>
- Developed an IoT-based intrusion-detection system using Arduino that triggers a camera module when a laser beam is interrupted. - Configured real-time notification logic to send captured photo alerts to the owner. - Integrated sensors, a camera module, and notification logic into a low-cost intrusion-detection system.	
Phishing Detection Browser Extension	<i>JavaScript</i>
- Built a JavaScript browser extension that analyzes URLs in real time using pattern-matching logic to detect potential phishing websites. - Implemented client-side detection logic to warn users before interacting with suspicious websites. - Designed the extension to improve everyday browsing safety and cybersecurity awareness.	

ACHIEVEMENTS

- Maintained a CGPA of 8.56/10 during the first year of B.Tech.
- Selected to represent the college team at Smart India Hackathon (SIH) 2K26.
- Built three functional projects spanning IoT, cybersecurity, and civic-tech during the first year.
- Participated in the MOSIP Decode Hackathon at the Digital Governance Summit 2026.

CERTIFICATIONS

Claude Code 101 — Claude — Python Advanced Certificate — CodeWithHarry
MOSIP Decode Hackathon — Digital Governance Summit 2026
